MERN STACK

TRAINING TR-103 REPORT DAY 2

26 JUNE 2026

Overview:

The second day of the MERN Stack training focused on learning HTML Lists, the Marquee tag, and multimedia elements like Images and Videos. I learned how to organize content using different types of lists, create scrolling text with the marquee tag, and add images and videos to web pages. The hands-on practice helped us understand how these elements make web pages more structured, interactive, and visually appealing.

Learning Objectives:

- Understand the concept and purpose of HTML Lists.
- Learn to create ordered and unordered lists using HTML.
- Explore the Marquee tag for displaying scrolling text.
- Learn how to insert images using the `<img>` tag.
- Understand how to embed videos using the `<video>` tag.
- Develop webpages containing lists and multimedia elements.

HTML Lists

HTML lists are used to organize and display information in a structured format, making web pages more readable and user-friendly. Lists help present related items in an organized manner and are commonly used for menus, instructions, features, and navigation links.

Types of HTML Lists:

- **Ordered List (<ol>)** – Displays items in a numbered sequence.
- **Unordered List (<ul>)** – Displays items using bullets.
- **List Item (<li>)** – Defines each item within the list.

Using lists improves the readability of content and makes information easier to understand.

```
<h3>Nested Unordered List</h3>
<p>GeeksforGeekscourses list </p>
<ul type = 'bullet'>
    <li>DSA
        <ul type ='circle'>
            <li>Array</li>
            <li>Linked list</li>
            <li>Stack</li>
            <li>Queue</li>
        </ul>
    </li>
    <li>Web Technologies
        <ul type ='circle'>
            <li>HTML</li>
            <li>CSS</li>
            <li>JavaScript</li>
        </ul>
    </li>
    <li>Aptitude</li>
    <li>Gate</li>
    <li>Placement</li>
</ul>
```

Task

Nested Unordered List

GeeksforGeekscourses list

- DSA
  - Array
  - Linked list
  - Stack
  - Queue
- Web Technologies
  - HTML
  - CSS
  - JavaScript
- Aptitude
- Gate
- Placement

Output

Marquee Tag:

The **<marquee>** tag is used to create scrolling text or images on a webpage. It allows content to move in different directions such as left, right, up, or down, making the webpage more attractive.

Features:

- Scrolls text or images automatically.
- Supports left, right, up, and down directions.
- Allows control over scrolling speed and behavior.

LEFT DIRECTION

UP DIRECTION

RIGHT DIRECTION

N

Image Tag:

The **<img>** tag is used to display images on a webpage. It is a self-closing tag that uses the **src** attribute to specify the image path and the **alt** attribute to display alternative text if the image cannot be shown.

Common attributes:

- **src** – Specifies the image path.
- **alt** – Displays alternative text.
- **width** – Sets the image width.
- **height** – Sets the image height.

Images make webpages more attractive and easier to understand.

Video Tag:

The **<video>** tag is used to add videos to a webpage. It allows users to watch videos directly on the website.

Common attributes:

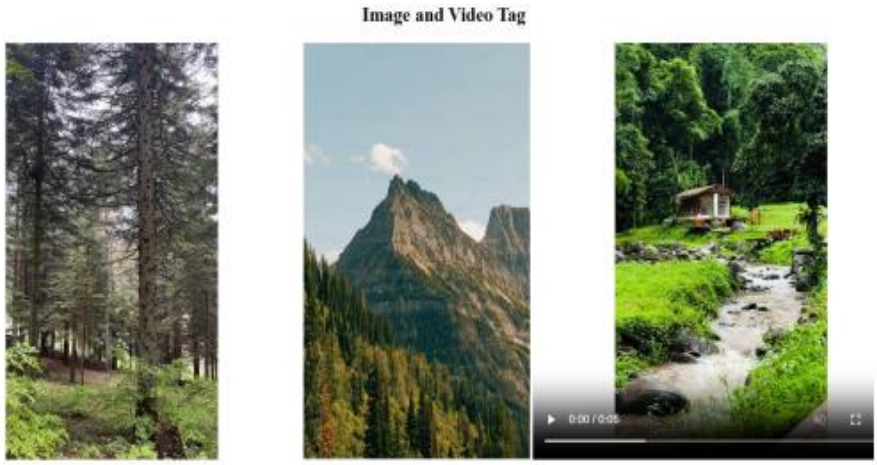

- **src** – Specifies the video file.
- **controls** – Shows play, pause, and volume controls.
- **autoplay** – Plays the video automatically.
- **loop** – Repeats the video continuously.
- **muted** – Plays the video without sound.

Videos make webpages more interactive and engaging.

Task:

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Image and Video</title>
</head>
<body>
    <h2 align="center">Image and Video Tag:</h2>
    <video src="https://www.pexels.com/download/video/37871510/" height="500" width="500" controls muted autoplay loop></video>
    <img src="https://encrypted-tbn0.gstatic.com/images?q=tbn:ANd9GcQWmGGDv__9-VFr56bITQWW0rKPhElvpOY0k6QsGTSOeaHv0YkWV5gYLE&s=10" height="500" width="300">
    <video src="https://www.pexels.com/download/video/38250138/" height="500" width="500" controls muted autoplay loop></video>
</body>
</html>
```

Output:

Conclusion:

By the end of Day 2, I learned how to organize webpage content using HTML lists and add multimedia elements such as marquee, images, and videos. The practical exercises improved my understanding of creating interactive and visually appealing web pages, strengthening my basic web development skills.
