MERN STACK

TRAINING TR-103 REPORT DAY 5

30 JUNE 2026

Overview:

The fifth day of the MERN Stack training focused on learning the ** ** element and important CSS properties such as **Border, Margin, and Padding**. I understood how the element is used to group HTML elements and create webpage layouts. I also understand how border, margin, and padding help control the appearance and spacing of elements, making web pages more organized and visually appealing.

Learning Objectives:

- Understand the purpose of the element.
- Learn how to group HTML elements using .
- Understand the Border property in CSS.
- Learn the concepts of Margin and Padding.
- Difference between Margin and Padding.
- Apply CSS properties to improve webpage layout and design.

CSS

Element

The (Division) element is a container used to group HTML elements together. It helps organize the structure of a webpage and makes it easier to apply CSS styles. By default, a has no visual appearance and is widely used for creating webpage layouts.

Features:

- Groups HTML elements together.
- Helps organize webpage structure.
- Makes applying CSS easier.
- Commonly used for webpage layouts.

Border

A border is the line that surrounds an HTML element. It separates the element from other elements and helps define its boundaries. Borders can have different colors, widths, and styles such as solid, dashed, and dotted.

Features:

- Surrounds an HTML element.
- Defines element boundaries.
- Supports different colors, widths, and styles.

Margin

Margin is the space outside an element's border. It creates distance between elements, making the webpage look neat and organized.

Features:

- Space outside the border.
- Separates one element from another.
- Improves webpage layout.

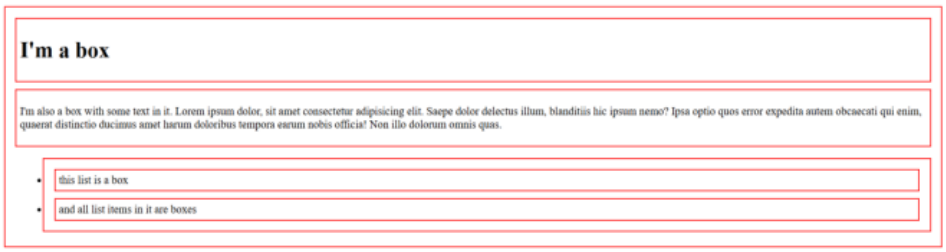

Padding

Padding is the space between an element's content and its border. It creates space inside the element, making the content easier to read and improving the overall appearance.

Features:

- Space between content and border.
- Improves readability.
- Increases space inside the element.

Task:

```
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Document</title>
    <style>
        *{
            box-sizing: border-box;
        }
        div{
            border: 2px solid red;
            margin: 10px;
            padding: 5px;
        }
    </style>
</head>

<body>
    <h1>TASK 1</h1>
    <div>
        <div>
            <h1>I'm a box</h1>
        </div>

        <div>
            <p>I'm also a box with some text in it. Lorem ipsum dolor, sit amet consectetur adipisicing elit. Saepe
                dolor
                delectus illum, blanditiis hic ipsum nemo? Ipsa optio quos error expedita autem obcaecati qui enim,
                queerat
                distinctio ducimus amet harum doloribus tempora earum nobis officia! Non illo dolorum omnis quas.</p>
        </div>

            <ul>
                <div>
                <li>
                    <div>this list is a box</div>
                </li>
                <li>
                    <div>and all list items in it are boxes</div>
                </li>
                </div>
            </ul>

    </div>
</body>
```

Different Border Radius Properties

Conclusion:

By the end of Day 5, I learned how to use the `<div>` element to organize webpage content and understood the importance of Border, Margin, and Padding in CSS. These concepts helped me create cleaner, well-structured, and visually appealing web page layouts.
